IceWall SSO

Version 10.0

Troubleshooting Guide

August 2010

Printed in Japan

HP Part No. B1544-97003

Rev.111020B

Notice

The information contained in this document is subject to change without notice.

Meticulous care has been taken in the preparation of this document, however, if a questionable or erroneous item, or an omission of content is found, please contact us.

Hewlett-Packard Japan, Ltd. shall not be liable for errors contained herein or for incidental or consequential damage in connection with the furnishing, performance or use of this document.

The copyright of this document is assigned to Hewlett-Packard Development Company, L.P. No part of this document may be photocopied or reproduced without prior written consent by Hewlett-Packard Japan, Ltd.

This manual and media, such as the CD-ROM supplied as a part of the product's package, are only to be used with this product.

IceWall is a trademark of Hewlett-Packard Japan, Ltd.

Adobe is a trademark of Adobe Systems Incorporated in the United States and/or other countries.
Intel, the Intel logo, Intel. Leap ahead., Intel. Leap ahead. logo, Itanium and Itanium Inside are trademarks or registered trademarks of Intel Corporation or its subsidiaries in the United States and other countries.
Microsoft and Windows are trademarks or registered trademarks of Microsoft Corporation in the United States and other countries.
Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

– Table of Contents –

1 Introduction

This guide will help you troubleshoot common problems you may encounter with IceWall SSO and provide the information on known issues in this version.
The guide also provides contact information you can access if problems cannot be resolved after using this guide together with the information you need to collect before you make an inquiry.
If a problem occurs, be sure to read this guide before making an inquiry.

1.1 Version designations in the text

The table below gives the meanings of the version designations added to the description.

Designation	Meaning
10.0	An item added with the version enclosed in the square. In this case, the designation indicates the item was added with 10.0.
10.0	An item where the functional specification was changed or a function added with the version enclosed in the oval. In this case, the designation indicates a specification change or added function with 10.0.

2   Available Resources

2.1   Product manuals

To examine a problem by using the product manuals, refer to the documentation sets which fit each audience group below:

- **To everyone using IceWall SSO for the first time**
  IceWall SSO Version 10.0 Enterprise Edition Read Me First
  or
  IceWall SSO Version 10.0 Standard Edition Read Me First

- **To everyone installing IceWall SSO for the first time**
  IceWall SSO Version 10.0 Installation Guide
  IceWall SSO Version 10.0 User's Manual
  IceWall SSO Version 10.0 Sample Setup Guide

- **To everyone upgrading from a previous version**
  IceWall SSO Version 10.0 Installation Guide

- **To everyone configuring advanced settings**
  IceWall SSO Version 10.0 User's Manual
  IceWall SSO Version 10.0 Configuration Manual for Automatic Form Authentication
  IceWall SSO Version 10.0 Installation Guide for Client Certificates Option

- **To everyone using ancilliary tools**
  IceWall SSO Version 10.0 Installation Guide for Dynamic Menu Portal
  IceWall SSO Version 10.0 Installation Guide for Configuration Manager
  IceWall SSO Version 10.0 Installation Guide of Domain Gateway Option for UNIX
  IceWall SSO Version 10.0 Registration Tool Manual

- **To everyone who can and/or wants to customize parameter**
  IceWall SSO Version 10.0 Reference Manual

- **To everyone who wants to customize the authentication process and/or HTML pages**
  IceWall SSO Version 10.0 UserExit Routine Developer's Manual
  IceWall SSO Version 10.0 Password Encryption Library Developer's Manual
  IceWall SSO Version 10.0 Standard HTML Customization Guide
  IceWall SSO Version 10.0 Standard HTML Customization Guide of Domain Gateway Option for UNIX
  IceWall SSO Version 10.0 IceWall Cert Protocol 2.0 Developer's Manual
  IceWall SSO Version 10.0 Authentication Database Encryption Routine Developer's Manual

- **To Administrators managing applications connected to IceWall SSO**
  IceWall SSO Version 10.0 Web Application Developer's Manual
  IceWall SSO Version 10.0 IceWall Cert Protocol 2.0 Developer's Manual

2.2　Resources on the Internet

- **HP Japan IceWall SSO system requirements and configuration**
  http://h50146.www5.hp.com/products/software/security/icewall/sso/spec/index.html

- **HP Japan IceWall SSO FAQ**
  http://h50146.www5.hp.com/products/software/security/icewall/sso/faq/index.html

  Customers who have purchased support coverage for IceWall products should also use the URL below.

3   IceWall SSO Technical Training

A training course is available to acquire the knowledge needed to install and operate HP IceWall SSO. In this training course, you will learn the overall architecture and functions of HP IceWall SSO through hands-on training.
For details, see the site below.

IceWall SSO training information
http://h50146.www5.hp.com/products/software/security/icewall/sso/training.html

4   Frequently Asked Questions (FAQ)

This chapter decribes frequently asked questions and the answers to those questions.

The questions and answers in this manual are extracted from the FAQ in the HP IceWall support page. If you cannot find an appropriate answer here, please visit the HP IceWall support page.

4.1 Forwarder (dfw) FAQ

Frequently asked questions regarding Forwarder are listed below:

Q. Why does Forwarder not start?

Q. How can I change the configuration?

Q. The system does not convert the URLs into ones accessible through IceWall SSO. How can I correct this?

Q. It takes a long time to display the contents. Can this be fixed?

Q. Forwarder cannot communicate with the Backend Web Server.

Q. The page or image is not displayed. Is there a fix for this?

Q. The page is only partially displayed. How do I fix this?

Q. The system error page is displayed.

Q. Requests are not logged to the dfw.log/dfwerr.log files even though they are received; at the same time, errors are recorded in the web server that runs the IceWall server.

Q. Can communication errors between the client and Forwarder be detected?

Q. Why does Forwarder not start?

A. Check the items below:

● **Are the links to the library set correctly?**
  → See "Installing the Forwarder" in the Installation Guide.

● **Is the library version correct?**
  → See "Verifying version information" in the Installation Guide.

● **Is the web server configured correctly?**
  → See "Installing the Forwarder" in the Installation Guide.

● **Has an error occurred in the web server?**
  → Forwarder will not start if an error has occurred on the web server. Check the error logs on the web server.

● **Are the owner and permissions correct?**
  → The user who runs the web server must have read/write permission for the IceWall SSO configuration files. See "Installation" in the Installation Guide.

- 8 -

Q. How can I change the configuration?

A. Be aware of the following:

● **Modifications in the configuration files are reflected in Forwarder as soon as they are made.**
→ See "Forwarder configuration file" in the User's Manual.

● **Use UNIX linefeeds (0x0a) as the line terminator in the configuration files.**
→ If you save the files on Windows, the UNIX linefeed (LF) codes might be modified to LF + CR. Keep this in mind when saving the files in the target server.

Q. The system does not convert the URLs into ones accessible through IceWall SSO. How can I correct this?

A. Check the items below:

● **Does URL conversion apply to the Content-type?**
→ Check CTYPE in the host configuration file.

● **Are the elements and attributes to be converted set in URLKEY in the host configuration file?**
→ Check URLKEY in the host configuration file.

● **Is the URL written in JavaScript?**
→ URLs that cannot be converted with URLKEY can be converted with REPKEY. See "REPKEY" in the Reference Manual and "URL Conversion," "Keyword Conversion," "JavaScript," and other chapters in the Web Application Developer's Manual.

● **Is the content compressed by HTTP compression?** [10.0]
→ URL conversion and keyword conversion will not function for compressed HTTP contents that IceWall receives.
Configure the Backend Web Server to send content that is not compressed by HTTP compression, if IceWall has to perform URL conversion or keyword conversion.

Q. It takes a long time to display the contents. Can this be fixed?

A. Check the items below:

● **Are there any DNS or other network delays?**
→ Ask the network administrator.

● **Does the IceWall server have enough system resources?**
→ Use the top command to check the CPU utilization, web server memory utilization, swap activity, and other parameters.

● **Is the Keep-Alive configuration of the Backend Web Server set to ON?**
→ See "Keep-Alive configuration" in the Web Application Developer's Manual and "Keep-Alive between Forwarder and the Backend Web Server" in the User's Manual.

● **Has any problem occurred on the Backend Web Server?**
→ Check the error logs on the Backend Web Server.

● **Has the performance of the Authentication Server declined?**
→ See "Authentication Module performance" in the User's Manual.

● **Have you identified the processes which cause the delay?**
→ The communication duration with the Backend Web Server and processing duration at Forwarder can be confirmed in the Forwarder access log. See "Forwarder access log format" in the User's Manual.

Q. Forwarder cannot communicate with the Backend Web Server.

A. Check the items below:

- ● **Are there any network problems such as incorrect firewall settings?**
  → Ask the network administrator.

- ● **Is the connection with the Backend Web Server successful?**
  → Use a browser, a telnet command, or other means to check communication between the IceWall server and Backend Web Server.

- ● **Is the Backend Web Server returning a response?**
  → Check the Backend Web Server access log.

- ● **Is the host name that is set in HOST (SHOST) correct?**
  → Check HOST (SHOST) in the Forwarder configuration file (dfw.conf).

- ● **Is SSL 3.0 used with the SSL Option enabled?**
  → See "Version of SSL connection and usable encryption methods" in the Web Application Developer's Manual.

- ● **Is the "TripleDES" cipher specified for Apache with the SSL Option enabled?**
  → See "SSL 3.0 cipher with Apache" in the Web Application Developer's Manual.

Q. The page or image is not displayed. Is there a fix for this?

A. Check the items below:

● **Is the connection between the client and the IceWall server successful?**
→ Use the browser output, ping command, or other means to check communication. If there is no communication, check if there are any Forwarder processes on the web server where Forwarder runs and if any log messages have been output to the access log.

● **Are there any DNS or other network problems?**
→ Ask the network administrator.

● **Have you specified the wrong URL?**
→ When IceWall SSO is installed, the URL for accessing the Backend Web Server changes. Check the URL.

● **Is the connection with the Backend Web Server successful?**
→ Use telnet commands or other means to check communication between the IceWall server and Backend Web Server.

● **Is the Backend Web Server returning a response?**
→ Check the Backend Web Server access log.

● **Is the correct MIME type set for the Backend Web Server?**
→ Check the Backend Web Server configuration files.

● **Has an error occurred on the web server?**
→ Check the error logs on the Backend Web Server.

● **Has a timeout occurred in Forwarder or the web server?**
→ Check the Forwarder error log. For details about the Forwarder timeout settings, see "TIMEOUT" and "CLOSETIME" in the Reference Manual. Check the error logs on the web server to make sure that web server CGI timeouts, request timeouts, or other timeouts have not occurred.

● **Is the content cached in a proxy server?**
→ Delete the browser file cache, and then try accessing again.

Q. The page is only partially displayed. How do I fix this?

A. Check the items below:

● **Is the source content complete?**
   → Check if the source content is correct.

● **Does the content pass through a proxy server?**
   → The content that is cached in the proxy server may not be complete. Check the proxy server settings.

● **Is the Backend Web Server responding correctly?**
   → Check the log of the Backend Web Server and other data.

● **Is the correct MIME type set for the Backend Web Server?**
   → If the correct MIME type is not set, the content may not be displayed correctly because the default value is applied. Check the Backend Web Server configuration files.

● **Is the CLOSETIME setting correct?**
   → See "CLOSETIME" in the Reference Manual.

Q. The system error page is displayed.

A. Check the items below:

● **Are the configuration values for MAXURL and MAXQUERY correct?**
    → See "MAXURL" and "MAXQUERY" in the Reference Manual.

Q. Requests are not logged to the dfw.log/dfwerr.log files even though they are received; at the same time, errors are recorded in the web server that runs the IceWall server.

A. If a request from the client is identified as an error by the web server that runs the IceWall server, the request is not delivered to Forwarder, so it can not be logged to dfw.log or dfwerr.log. Check the error logs on the web server.

Q. Can communication errors between the client and Forwarder be detected?

A. Forwarder is a CGI process that runs on a web server.
Communication with the client is performed with the web server.
As a result, network problems between the client and web server are not detected as communication errors by Forwarder.
Check the error logs on the web server where Forwarder runs.

4.2 Authentication Module (certd) FAQ

Common questions and issues regarding the Authentication Module are listed below:

Q. The Authentication Module does not start. How can this be fixed?

Q. The Authentication Module does not stop. How can this be fixed?

Q. How can I change the configuration?

Q. The error "Pool Queue is Full" has occurred. How can I locate the source of the problem?

Q. The following error message is logged to the Authentication Module error log (certerr.log).
"Fatal: Cookie:IW_INFO=xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx is Locked by Another Thread. [EC11302-20013]"

Q. The following error message is logged to the Authentication Module error log (certerr.log).
"Warning: Unknown RequestID Error. [XXNNNNN-NNNNN]"

Q. The following error message is output to the Authentication Module error log (certerr.log).
"Fatal: accept() Error: too many open files. [XXNNNNN-NNNNN]"

Q. The Authentication Module does not start. How can this be fixed?

A. Check the items below:

● **Are you logged in to the Authentication Server as a user who can start the Authentication Module?**
→ Log in again as a user who can start the Authentication Module.

● **Are the links to the library set correctly?**
→ See "Verifying installed files" in the Installation Guide.

● **Is the library version correct?**
→ See "Verifying version information" in the Installation Guide.

● **Are the start and stop commands (start-cert and end-cert) set correctly?**
→ See "Installing the Authentication Module" in the Installation Guide.

● **Are the owner and permission of the Authentication Module and start command correct?**
→ See "Verifying installed files" in the Installation Guide.

● **Are the owner and permission of the configuration files (cert.conf, cert.acl, cert.grp, etc.) correct?**
→ See "Verifying installed files" in the Installation Guide.

● **Is the content of the configuration file (PWDFORBID in cert.conf) correct?**
→ Check the PWDFORBID parameter in the Authentication Module configuration file and the forbidden password configuration file.

Q. The Authentication Module does not stop. How can this be fixed?

A. Check the items below:

● **Are you logged in to the Authentication Server as a user who can stop the Authentication Module?**
→ Log in again as a user who can start the Authentication Module.

● **Are the links to the library set correctly?**
→ See "Verifying installed files" in the Installation Guide.

● **Is the library version correct?**
→ See "Verifying version information" in the Installation Guide.

● **Is the stop command (end-cert) setting correct?**
→ See "Installing the Authentication Module" in the Installation Guide.

● **Are the owner and permission correct?**
→ See "Verifying installed files" in the Installation Guide.

● **Has an [EC01202-25078] request queue overflow error message been output to the error log?**
→ A stop request of the Authentication Module is also a type of request. A stop request may not be accepted if the queue has overflowed.

● **Did you execute the stop command (end-cert) on the running server?** [10.0]
→ In version 10.0, IceWall rejects stop requests if you do not execute the stop command (end-cert) on the running server.

Q. How can I change the configuration?

A. Check the items below:

● **To have the changes reflected in the Authentication Module, shut down the module and restart it. However, the configuration can be reloaded without shutting down and restarting for the files and parameters below.**
   • A portion of the parameters in the Authentication Module configuration file
   • Group configuration file
   • Access control file
   • Forbidden password configuration file
   • Request control configuration file

Some changes may not be reflected if the number of requests is high, so make changes when the number is low. Use info-cert or other means to check the utilization.

→ See "Authentication Module configuration file" in the User's Manual.

* The information of the logged-in user is not deleted for a reload (reload-cert).

● **Use UNIX linefeeds (0x0a) as the line terminator in the configuration files.**
   → If you save the files on Windows, the UNIX linefeed (LF) codes might be modified to CR + LF. Keep this in mind when transferring the files to the target server.

● **On the Authentication Servers configured as a redundant system, you can change the configuration without stopping all the servers.**
   → See "Changing a configuration that uses the Authentication Module's non-stop maintenance function" in the User's Manual.

Q. The error "Pool Queue is Full" has occurred. How can I locate the source of the problem?

A. Check the message IDs of the error messages in the error log to see which queue has overflowed.

● **Has the error [EC01202-25078] been output?**
→ This error indicates that a request queue has overflowed.
The configuration values for REQQUESIZE, MAXREQTHREAD, and MAXDBCONNECT must be revised.

● **Has the error [EC134xx-25078] been output?**
→ This error indicates that a replication queue has overflowed.
The configuration values for REPQUESIZE and MAXREPTHREAD must be revised.
* To find the method for calculating the configuration values,
see "Parameter calculation method" in the User's Manual.
For details on each configuration parameter, see the Reference Manual.

● **Is there a problem with the Authentication DB?**
→ If the Authentication DB does not return a response, the requests can accumulate in the Authentication Module, which prevents requests waiting in the queue from being processed. Check the log and other data of the Authentication DB.

**Q. The following error message is logged to the Authentication Module error log (certerr.log).
"Fatal: Cookie:IW_INFO=xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx is Locked by Another Thread. [EC11302-20013]"**

A. This error message is output when the automatic logout operation of the Authentication Module occurs at the same time as user-generated requests for access control.
This is a design specification of the product.

Q. The following error message is logged to the Authentication Module error log (certerr.log).
"Warning: Unknown RequestID Error. [XXNNNNN-NNNNN]"

A. Check the items below:

● **Has the following message been output to the Forwarder error log?**
Warning: Bad Response Data. [XXNNNNN-NNNNN]
Warning: Send Request Failed. [XXNNNNN-NNNNN]
or
Fatal: Recv Data Failed. [XXNNNNN-NNNNN]
Fatal: Data Receive Failed. [XXNNNNN-NNNNN]

→ A timeout may have occurred in the Authentication Module.
See "RECVWAITTIME" in the Reference Manual, and change the request receive timeout value.
Also, network or related problems may make it impossible to receive a request. Ask the network administrator.

Q. The following error message is output to the Authentication Module error log (certerr.log).
"Fatal: accept() Error: too many open files. [XXNNNNN-NNNNN]"

A. Check the items below:

● **Is the maximum number of file descriptors (MAXDBCONNECT +MAXREQTHREAD+REQQUESIZE+MAXREPTHREAD+20) used by the Authentication Module set higher than the maximum number of the OS configuration?**
→ The above message is output when the maximum number of file descriptors that can be handled by the Authentication Module exceeds the maximum number of the OS (Operating System) configuration.

The maximum number of file descriptors that can be handled by the Authentication Module varies by OS as follows:

HP-UX: 60,000, Linux: 8192

Correct the configuration values of these parameters so that the sum of the file descriptors does not exceed the maximum number which the OS can accommodate.

4.3 Common questions and other FAQs

Common questions regarding both Forwarder and the Authentication Module and other common questions are listed below.

Q. Users can access the content even though they are not logged in. How is this problem fixed?

Q. The login page is displayed repeatedly.

Q. "Message Nothing[XXNNNNN-NNNNN]" is output to the error log.

Q. Can you explain the meaning of the log messages?

Q. When accessing a file with a Japanese file name, the Japanese file name in the access log appears as garbled characters.

Q. How do I tune the performance?

Q. Could you explain the parameter calculation methods for tuning IceWall performance?

Q. Can I use basic authentication in reverse proxy mode?

Q. Does IceWall possibly query the DNS server?

Q. Status-Code 408 "Request Timeout" is output to the browser. What does this mean?

Q. Can I set the Keep-Alive configuration of the Backend Web Servers to ON?

Q. Could you explain the IceWall operating environment (such as OS, web server, and database)?

Q. Does installing patches for the OS have any effect on IceWall?

Q. How long will the product be supported?

Q. Does the number of user licenses mean the number of simultaneous connections, or the number of registered users?

Q. Could you explain the version upgrade procedure?

Q. When upgrading, can I still use the configuration files of the previous version?

Q. Does IceWall run correctly even on leap days?

Q. What precautions should I take when backing up IceWall?

Q. Does IceWall convert character code?

Q. Users can access the content even though they are not logged in. How is this problem fixed?

A. Check the items below:

● **Are you using a cookie with an expiration date?**
→ Delete the cookies stored in the browser.

● **Is the system in reverse proxy mode?**
→ The login operation does not work in reverse proxy mode.

● **Is this really a URL by which the IceWall forwards the content?**
→ Check the URL.

● **Does the browser have an old cache?**
→ Delete the browser file cache, and then try accessing again. Also, enabling LASTMOD_HEADER of Forwarder can fix this problem in some cases. See "LASTMOD_HEADER" in the Reference Manual.

● **Are you using the Forwarder functions where authentication or authorization is not needed?**
→ See "REV_PATH" and "NOCHK_EXT_ALIAS" in the Reference Manual.

Q. The login page is displayed repeatedly.

A.   Check the items below:

● **Is the browser set to "Disable cookies"?**
→ Check the browser settings.

● **Is the content cached in a proxy server?**
→ The proxy server cache is displayed. Either change the path so that it does not pass through the proxy server, or change the proxy server settings.

● **Has a session timeout occurred?**
→ See "COOKIETIME" and "LOMETHOD" in the Reference Manual.

● **Are duplicate logins set as forbidden?**
→ See "Session management" in the Web Application Developer's Manual and "COOKIETIME," "COOKIEEXP," "LOMETHOD," "DUPLOGIN," and "DUPKIND" in the Reference Manual.

Q. "Message Nothing[XXNNNNN-NNNNN]" is output to the error log.

A. Check the items below:

The above error message may be output if the message catalog was not loaded properly due to an incomplete update of the message catalog or insufficient server resources.
Search the message ID of [XXNNNNN-NNNNN] in "8. Log Message List" in this manual and find the message text that should normally be output.

Q. Can you explain the meaning of the log messages?

A. Check the items below:

● **Access logs**
→ See "Access logs" in the User's Manual and "8.1 Access log message list" in this manual.

● **Error logs**
→ See "8.2 Error log message list" in this manual.

Q. When accessing a file with a Japanese file name, the Japanese file name in the access log appears as garbled characters.

A. Check the item below:

Japanese text in the access log cannot be displayed.
Currently, IceWall SSO is not fully compatible with URLs that contain
Japanese, so no support is provided for Japanese URLs.

Q. How do I tune the performance?

A. Check the items below:

● **I want to do performance tuning of the IceWall SSO.**
  → See "Performance Tuning" in the User's Manual.

● **I want to do performance tuning of the web server.**
  → Refer to the web server manual and others.

● **I want to do performance tuning of the Authentication DB.**
  → Refer to the appropriate database manual.

● **I want to get system information to help me tune performance.**
  → For the Authentication Module, execute the info-cert command, and refer to the statistical information output to the access log.

● **I want to do performance tuning of the server itself.**
  → Please inquire with the OS provider and related resources directly.

Q. Could you explain the parameter calculation methods for tuning IceWall performance?

A. See "Parameter calculation method" in the User's Manual.
   For details on each configuration parameter, see the Reference Manual.

Q. Can I use basic authentication in reverse proxy mode?

A. No.
For details, see "Basic authentication configuration for reverse proxy mode" in the Web Application Developer's Manual.

Q. Does IceWall possibly query the DNS server?

A. IceWall SSO does not directly query the DNS server.
Host name resolution and similar operations depend on the server network settings.

Q. Status-Code 408 "Request Timeout" is output to the browser. What does this mean?

A. Status-Code request timeout may have occurred in the web server which runs Forwarder. Refer to the error logs on the web server, manuals, and others.

Q. Can I set the Keep-Alive configuration of the Backend Web Servers to ON?

A. Depending on the content and configuration of the Backend Web Servers, the Keep-Alive configuration may cause a response delay, so HP recommends disabling it. For details, see "Keep-Alive configuration" in the Web Application Developer's Manual.

Q. Could you explain the IceWall operating environment (such as OS, web server, and database)?

A. See "System Requirements" in the Installation Guide.
For the latest operating environment, see the Hewlett-Packard Japan homepage.
http://h50146.www5.hp.com/products/software/security/icewall/sso/spec/index.html

Q. Does installing patches for the OS have any effect on IceWall?

A. See "Known Issues" in the Release Note and "System Requirements" in the Installation Guide.
For the latest operating environment, see the Hewlett-Packard Japan homepage.
http://h50146.www5.hp.com/products/software/security/icewall/sso/spec/index.html

Q. How long will the product be supported?

A. Product support will be provided as follows:
  - Until two years after the end of availability of the product.

  For details about service agreements, contact a Hewlett-Packard sales representative.

Q. Does the number of user licenses mean the number of simultaneous connections, or the number of registered users?

A. It means the number of registered users. For details, see "Understanding the Authentication Server licenses" in Read Me First.

Q. Could you explain the version upgrade procedure?

A. See "Upgrading from Previous Versions" in the Installation Guide, or see the Release Note.

Q. When upgrading, can I still use the configuration files of the previous version?

A. You can use it without changes since IceWall SSO supports backwards compatibility.
For notes about operation after upgrading, see "Upgrading from Previous Versions" in the Installation Guide, or see the Release Note.

Q. Does IceWall run correctly even on leap days?

A. IceWall does not perform calendar management, so leap years have no effect.

Q. What precautions should I take when backing up IceWall?

A. The following precautions should be taken when using tar and other commands to make a backup.

● **Authentication Module**
   → Perform a backup with an Authentication Module in a stopped state.

● **Forwarder**
   → Stop the web server running Forwarder before performing a backup.

● **Dynamic Menu**
   → Stop the web application server running Dynamic Menu before performing a backup.

● **Dynamic Menu Portal**
   → Stop the web application server running Dynamic Menu Portal before performing a backup.

● **Domain Gateway Option module**
   → Stop the web server running Forwarder and the Domain Gateway Option module before performing a backup.

● **Configuration Manager**
   → Stop the web application server running Configuration Manager before performing a backup.

● **CFGAgent**
   → CFGAgent is started and run only when a request is made. Therefore, as long as configuration changes are not being made with Configuration Manager, it does not need to be stopped.

Q. Does IceWall convert character code?

A. IceWall SSO modules basically do not convert character code.

The Authentication Module retrieves the user information from the authentication database without changing the character code stored in the authentication database. The Authentication Module sends the user information to Forwarder without converting the character code, and it also sends the information to the Backend Web Server in the same character code.

However, the Authentication Module converts character code exceptionally, only when all of the following conditions apply.

● **The LDAPLANG parameter is set to 1 in the Authentication Module configuration file (cert.conf).**
● **The authentication database is keeping user information registered in Unicode.**
● **A character code is specified by the environment variable IW_LANG.**

With all of these conditions satisfied, user information held in the Authentication Module is converted from Unicode to the character code specified with the IW_LANG environmental variable.

User information sent to Forwarder also remains in the same converted character code, and it is also sent to the Backend Web Server in that character code.

* If using Oracle, the character code depends on the locale set by NSL_LANG. For details, see the Oracle manual.

5   Making Inquiries about Problems

This chapter describes the information necessary for making inquiries.
If your problem was not found in "4 Frequently Asked Questions (FAQ)," check the information here before making an inquiry.

5.1   Before making an inquiry

If your problem could not be resolved by examining the information in the manuals or through Internet references, collect the information below before making an inquiry.

- Type and version of the OS in use
- Type and version of the browser in use
- Type and version of the web server and Authentication DB
- Whether UserExit routines developed by the customer are installed. Basically, support cannot be provided if UserExit routines that were developed by the customer are installed. However, if the UserExit routines cannot be uninstalled due to operational convenience or other reasons, check specific information such as what types of processes are performed and what types of libraries are used.
- Version information of Forwarder and the Authentication Module For details on how to retrieve the version information, see "Verifying version information" in the Installation Guide.
- Log file information about the problem For details on how to retrieve the log files, see "Log Files" in the User's Manual.

5.2   Contact information

After collecting the information above, please direct your inquiry to the contacts below.
A Service Agreement and System Handle are required for making inquiries.

Contact information for problems
HP Response Center
Refer to the set of documents titled "Support Service Information."

Inquiries about HP IceWall SSO prices and non-technical matters
Inquiries about the HP IceWall family
http://www.hp.com/jp/iw_contact

6 Minimum and Maximum Parameter Values

This chapter describes the minimum and maximum parameter values that can be defined in the configuration files.
Parameters where the configuration parameters and values have been extended starting with a certain version are shown with their version numbers.

6.1 Forwarder (dfw)
6.1.1 Forwarder configuration file (dfw.conf)

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
Basic configuration	ALEVEL	Number	0	2
	ELEVEL	Number	0	3
	ACCESS	String	1 character	255 characters
	ERROR	String	1 character	255 characters
	ERRORINFO	String	UID, URL, IP, or AGENT	UID, URL, IP, AGENT
	TRACE	String	1 character	255 characters
	CATALOG	String	1 character	255 characters
	SECURITY	String	1 character	255 characters
	SECINFO ⑩	String	LOGIN, LOGOUT, PWDCHG, or AGENT	LOGIN, LOGOUT, PWDCHG, AGENT
	SECLEVEL	Number	0	2
	SECEXCPAGE	String	1 character	1024 characters
	SPKEY_TOPPAGE_URL ⑩	String	1 character	255 characters
	TRANSID ⑩	Number	0	1
	TRANSID_STR ⑩	String	1 character	16 characters
	TRACETIME ⑩	String	1 character	255 characters
	DFW_PROTOCOL	Number	0	1
	REQUEST_URI	Number	0	1
	VIRTUALPATH_ENV	String	1 character	255 characters
	VIRTUALURL_ALIAS	String	Alias name: 1 character URL: 1 character	Alias name: 64 characters URL: 128 characters
User authentication	CERT	String	Host name: 1 character Port number: 0	Host name: 64 characters Port number: 65535
	CERTLB ⑩	String	Authentication module identification key: 1 character Host name: 1 character Port number: 0	Authentication module identification key: 1 character Host name: 64 characters Port number: 65535
	CERTLB_TYPE ⑩	Number	0	1
	CERTFAILBACK ⑩	String	Host name: 1 character Port number: 0	Host name: 64 characters Port number: 65535

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
User authentication	CERTLBFAILBACK [10.0]	String	Authentication module identification key: 1 character Host name: 1 character Port number: 0	Authentication module identification key: 1 character Host name: 64 characters Port number: 65535
	COOKIENAME	String	1 character	64 characters
	COOKIEATTR	String	1 character	256 characters
	COOKIEALWAYS	Number	0	2
	POSTLIMIT_PAGE	String	LOGIN,FORCELOGIN, or PWDCHG	LOGIN,FORCELOGIN,PWDCHG
	POSTLIMIT_TIME	Number	1	3600
	POSTLIMIT_ENC	String	1 character	256 characters
	FORCELOGIN_ENC	String	1 character	256 characters
	SESSION	Number	0	1
	POSTKEY_LOGIN	String	1 character	64 characters
	POSTKEY_LOGOUT	String	1 character	64 characters
	POSTKEY_PWDCHG	String	1 character	64 characters
	REDIRECT	String	1 character	255 characters
	LOALIAS	String	1 character	64 characters
	ICP_VERSION	String	1.1, or 2.0	1.1, or 2.0
	ICP_AGENTSTR	String	1 character	35 characters
	ICP_ENCSTR [10.0]	String	1 character	32 characters
Template HTML	DOCS	String	1 character	255 characters
	LOCATIONURL	String	1 character	255 characters
	LOCATIONRETRY	Number	1	9
	HTML_CHARSET	String	1 character	64 characters
Backend web server	HOST	String	Alias name: 1 character Host name: 1 character Proxy server name: 1 character	Alias name: 64 characters Host name: 64 characters Proxy server name: 64 characters
	SHOST	String	Alias name: 1 character Host name: 1 character	Alias name: 64 characters Host name: 64 characters
	SVRFILE	String	Alias name: 1 character File name: 1 character	Alias name: 64 characters File name: 255 characters
Password change	PWDALIAS	String	1 character	64 characters
	MINLEN	Number	1	128
	MAXLEN	Number	1	128
	EXPIRE	Number	0	2048
	SAMEPASS	Number	0	1
	ALPHANUM	Number	0	13
Performance tuning	RETRYCNTC	Number	1	256
	RETRYTMC	Number	0	60
	CERT_TOUT	Number	1	600
	ALLOC	Number	1	1048576
	SET_CONTENT_LENGTH	Number	0	1
	POSTWAITTIME	Number	0	65536
Security	MAXURL	Number	1	4096
	MAXQUERY	Number	1	4096

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
Security	REV_PATH	Number	1 character	255 characters
	SESSION_ENC_KEY	String	1 character	256 characters
	DFWFILTER	String	0	2
	NOCHK_EXT_ALIAS	Number	Alias name: 1 character Case sensitivity flag: 0 Extension: 0 characters Overall settings: 4 characters	Alias name: 64 characters Case sensitivity flag: 1 Extension: 16 characters Overall settings: 256 characters
	REQUESTFILTER 10.0	String	LOGIN,LOG-OUT,PWD-CHG,AGTLOGIN,or AGTPWDCHG	LOGIN,LOG-OUT,PWD-CHG,AGTLOGIN,AGTPWDCHG
Client certificates	CC_UID	String	CN, EMAIL, or OU	CN, EMAIL, or OU
	CC_UIDKEYS	String	1 character	64 characters
	CC_UIDKEYE	String	1 character	64 characters
	CC_ENVNAME	String	1 character	64 characters
	CC_DECODE_FLG	Number	0	1
	CC_ENVUID	String	1 character	64 characters
	CC_ENVSERIAL	String	1 character	64 characters
	CC_ENVEXPIRE	String	1 character	64 characters
	CC_ENVISSUER	String	1 character	64 characters
POST data inheritance	POST_INHERIT	Number	0	1
	MAXPOST	Number	1	1024
	POSTNAME	String	1 character	64 characters
	POST_HTML	String	1 character	255 characters
	POST_ENC	String	1 character	256 characters
Agent	AGENT_KEY	String	Keyword: 1 character Alias name: 1 character	Keyword: 32 characters Alias name: 32 characters
	AGENT_PERMIT	String	Alias name: 1 character Determination method: IP, HOST, DOMAIN, or IPV6 Value: 1 character	Alias name: 64 characters Determination method: IP, HOST, DOMAIN or IPV6 Value: 256 characters
	QUERY_ENC	String	1 character	256 characters
	QUERY_ENC_NAME	String	1 character	16 characters
	QUERRY_ENC_KIND 10.0	String	1 character	16 characters
	RELOGIN_KEY	String	1 character	64 characters

6.1.2 Host configuration file (arbitrary file name)

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
Content conversion	CTYPE	String	1 character	255 characters
	URLKEY	String	Tag name: 1 character Attribute name: 1 character	Tag name: 30 characters Attribute name: 32 characters
	REPKEY	String	Search string: 1 character Replacement string: 1 character	Search string: 1024 characters Replacement string: 1024 characters
	REPKEY_EXT [10.0]	String	Search string: 1 character Replacement string: 1 character	Search string: 1024 characters Replacement string: 1024 characters
	URLCONV_FLG	Number	0	1
	URLCONV_ATTR_FLG [10.0]	Number	0	1
	ATTRQUOT_FLG	Number	0	1
Error page	SYSERR	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	SYSTOUT	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	ERRKEY	String	Search string: 1 character File name: 1 character	Search string: 1024 characters File name: 255 characters
Basic authentication	BASICAUTH	Number	0	1
	BA_UID	String	1 character	64 characters
	BA_PWD	String	1 character	64 characters
Information inheritance	HTTPDATA	String	Authentication DB column name: 1 character Send header name: 1 character	Authentication DB column name: 255 characters Send header name: 255 characters
	HEADER	String	Target header name: 1 character Process: ADD, ENVADD, NOTSEND, MODNAME, or MODVALUE Value: 1 character	Target header name: 255 characters Process: ADD, ENVADD, NOTSEND, MODNAME, or MODVALUE Value: 255 characters
	HEADER_FILTER	String	UID, SESSION, COOKIE, or TID	UID, SESSION, COOKIE, or TID
	COOKIE_FILTER	String	1 character	64 characters
	HEADER_NAME_TID [10.0]	String	1 character	64 characters
	HEADER_NAME_UID [10.0]	String	1 character	64 characters
	HEADER_NAME_SID [10.0]	String	1 character	64 characters

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
Information inheritance	RES_HEADER	String	Header name: 1 character Process: ADD, NOTSEND, MODNAME, or MODVALUE Value: 1 character	Header name: 255 characters Process: ADD, NOTSEND, MODNAME, or MODVALUE Value: 255 characters
	UNCONV_HEADER	String	LOCATION, or SET-COOKIE	LOCATION, SET-COOKIE
	CTRL_SPKEY	String	0 characters	$DFW,$REQUEST_URL,$HI-DEURL,$ALIAS,$USER_ID,$PASS-WORD,$IW_INFO,$KEY_LOGIN,$KEY_LOG-OUT,$KEY_PWDCHG,$PWDCHG_URL,$LOGOUT_URL,$TOPPAGE_URL,$PW-DHIDEURL,$IWTID
Handling of cross-site scripting	GETFILTER	String	1 character	32 characters
	GETEXCEPTION	String	1 character	32 characters
	GETFILTERERR	Number	0	2
	GETFILTER_LOG_FLG	Number	0	1
	POSTFILTER	String	1 character	32 characters
	POSTEXCEPTION	String	1 character	32 characters
	POSTFILTERERR	Number	0	2
	POSTFILTER_LOG_FLG	Number	0	1
	HTMLFILTER	String	1 character	32 characters
	HTMLFILTERERR	Number	0	2
	SVRFILTER	Number	0	2
	SVREXCEPTION	String	1 character	256 characters
	SVRFILTERERR	Number	0	2
	SVRFILTERSTR	String	1 character	64 characters
System tuning configuration	RETRYCNTW	Number	1	256
	RETRYTMW	Number	0	60
	TIMEOUT	Number	1	600
	CLOSETIME	Number	1	600
	BUFFER	Number	0	1
	LASTMOD_HEADER	Number	0	1
	CENCODE	Number	0	1
	URL_SCOLON	Number	0	1
	FO_SEND	Number	0	1
	FO_RECV	Number	0	1
	FO_NODATA	Number	0	1
	RECV_ZERO_FLG	Number	0	1
Form authentication	FORM_FILE	String	1 character	255 characters
Security	SSL_CIPHER_SUITE	String	1 character	512 characters

6.1.3 Form authentication configuration file (arbitrary file name)

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
Form authentication	FORM_METHOD	String	GET or POST	GET or POST
	FORM_SEND	String	Group name: 1 character Recipient path: 1 character	Group name: 64 characters Recipient path: 4096 characters
	FORM_URL	String	Group name: 1 character Target path: 1 character	Group name: 64 characters Target path: 255 characters
	FORM_KEY	String	Group name: 1 character Keyword: 1 character	Group name: 64 characters Keyword: 1024 characters
	FORM_HTML	String	Group name: 1 character File name: 1 character	Group name: 64 characters File name: 255 characters
	FORM_DATA_STR	String	Group name: 1 character Data type: POSTDATA, QUERY, ENCVAL, or NOENCVAL Attribute name: 1 character Attribute value: 1 character	Group name: 64 characters Data type: POSTDATA, QUERY, ENCVAL, or NOENCVAL Attribute name: 64 characters Attribute value: 1024 characters
	FORM_DATA_USR	String	Group name: 1 character Data type: POSTDATA, QUERY, ENCVAL, or NOENCVAL Attribute name: 1 character Authentication DB column name: 1 character	Group name: 64 characters Data type: POSTDATA, QUERY, ENCVAL, or NOENCVAL Attribute name: 64 characters Authentication DB column name: 64 characters
	FORM_DATA_PAGE	String	Group name: 1 character Data type: POSTDATA, QUERY, ENCVAL, or NOENCVAL Attribute name: 1 character Search attribute name: 1 character	Group name: 64 characters Data type: POSTDATA, QUERY, ENCVAL, or NOENCVAL Attribute name: 64 characters Search attribute name: 64 characters
	FORM_KEY_EXCEPTION [10.0]	String	Group name: 1 character Keyword: 1 character	Group name: 64 characters Keyword: 1024 characters
	FORM_DATA_PAGE_REF [10.0]	Number	0	1

6.1.4 HTML configuration file (html.conf)

Page parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
Login				
	LOGIN_UID	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	LOGIN_CERT	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	LOGIN_FORCE	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	LOGIN_ERR_UID	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	LOGIN_ERR_PWD	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	LOGIN_ERR_LOCK	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	LOGIN_ERR_1STCERT	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	LOGIN_ERR_SERIAL	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	LOGIN_ERR_NOGRP	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	LOGIN_ERR_STOP	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	LOGIN_ERR_LIMIT	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	LOGIN_ERR_POSTLIMIT	String	1 character	255 characters

Page parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
Access control	ACCESS_DENY	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	DATA_SEND_ERR	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	REQUEST_ACL_ERR 10.0	String	Filename: 1 character Status: 000 Status message: 1 character	Storage location, filename: 255 characters Status: 999 Status message: 255 characters
	FILTER_REQUEST 10.0	String	Filename: 1 character Status: 000 Status message: 1 character	Filename: 255 characters Status: 999 Status message: 255 characters
POST data inheritance error	MAXPOST_ERR	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
Logout	LOGOUT	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	LOGOUT_SUCCESS	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	LOGOUT_EXPIRE	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	LOGOUT_FAILURE	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
Password change	PWDCHG	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	PWDCHG_SUCCESS	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	PWDCHG_ERR_OLD	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	PWDCHG_ERR_REENT	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	PWDCHG_ERR_POLICY	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters

Page parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
Password change	PWDCHG_ERR_LOG NG	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	PWDCHG_ERR_VIO	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	PWDCHG_FAILURE	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	PWDCHG_WARNING	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	PWDCHG_ERR_POST LIMIT	String	1 character	255 characters
Cross-site scripting errors	FILTER_GET	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	FILTER_POST	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	FILTER_HTML	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	FILTER_SVR	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
System errors	SYSTEM_ERR	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	SYSTEM_ERR_NOALI AS	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	SYSTEM_ERR_BADA LIAS	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	SYSTEM_DOWN_CER TD	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	SYSTEM_DOWN_DB	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	SYSTEM_DOWN_HTT P	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters

Page parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
System errors	SYSTEM_TOUT_CERTD	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	SYSTEM_TOUT_HTTP	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	SYSTEM_BUSY_DB [10.0]	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
User-defined errors	USREXT_ERR1	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	USREXT_ERR2	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	USREXT_ERR3	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	USREXT_ERR4	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	USREXT_ERR5	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters
	USREXT_ERR6	String	URL: 1 character Status: 000 Status message: 1 character	URL: 255 characters Status: 999 Status message: 255 characters

6.2   Authentication Module (certd)
6.2.1   Authentication Module configuration file (cert.conf)

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
Basic configuration	ALEVEL	Number	0	3
	ELEVEL	Number	0	3
	ACCESS	String	1 character	255 characters
	ERROR	String	1 character	255 characters
	TRACE	String	1 character	255 characters
	CATALOG	String	1 character	255 characters
	LOGINFO	Number	0	2
	LOGPERF	Number	0	1
	PERFORMANCE	String	1 character	255 characters
	INFORMATION	String	1 character	255 characters
	TRANSID	Number	0	1
	PORT	Number	0	65535
	IPV6LISTEN [10.0]	Number	0	2

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
Basic configuration	HTTPPORT 10.0	Number	1	65535
	HTTPECHOHEADER 10.0	Number	0	1
Access control	GROUP	String	1 character	255 characters
	ACL	String	1 character	255 characters
	ACLREQUEST	String	1 character	255 characters
	ADGROUP	Number	0	1
	ADGROUPDN	String	1 character	255 characters
	ADGROUPINTERVAL	Number	0	86400
	ADGROUPPRINAME	String	1 character	255 characters
	ADGROUPPREFIX	String	1 character	255 characters
	ADGROUPMAXMEM-BER	Number	0	50
Session policy	COOKIETIME	Number	1	32768
	COOKIEEXP	Number	0	1
	COOKIERETRY	Number	0	100
	LOMETHOD	Number	0	1
	DUPLOGIN	Number	0	1
	DUPKIND	Number	0	1
	PARALOGIN	Number	0	1
	ACCCTRLFLG	Number	0	2
	CERTUNIQUEKEY 10.0	String	1 character	1 character
	SESSIONIDLEN 10.0	Number	32 or 64	32 or 64
Password policy	LOCKCOUNT	Number	0	256
	PWDEXPCHK	Number	0	1
	PWDHISCHK	Number	0	1
	PWDHISCNT	Number	1	9
	PWDFORBID	String	1 character	255 characters
	PWDEXPWARN	Number	0	365
	PWDLOGINHASH 10.0	String	MD5, SHA, SHA256, PLAIN, AUTO-PLAIN, or AUTO-MD5	MD5, SHA, SHA256, PLAIN, AUTO-PLAIN, or AUTO-MD5
	PWDCHGHASH 10.0	String	MD5, SHA, SHA256, PLAIN, AUTO-PLAIN, or AUTO-MD5	MD5, SHA, SHA256, PLAIN, AUTO-PLAIN, or AUTO-MD5
	PWDMINLEN 10.0	Number	1	128
	PWDMAXLEN 10.0	Number	1	128
	PWDEXPIRE 10.0	Number	0	2048
	PWDSAMEPASS 10.0	Number	0	1
	PWDALPHANUM 10.0	Number	0	13
Authentication DB	DBHOST (ORACLE edition)	String	SID: 1 character	SID: 32 characters
	DBHOST (LDAP edition)	String	Host name: 1 character Port number: 0	Host name: 64 characters Port number: 65535
	DBHOST (MSAD edition)	String	Host name: 1 character Port number: 0	Host name: 64 characters Port number: 65535

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
Authentication DB	DBHOST (NED edition)	String	Host name: 1 character Port number: 0	Host name: 64 characters Port number: 65535
	DBHOST (MySQL edition)	String	Database name: 1 character Host name: 1 character Port number: 0 ODBC driver name: 1 character	Database name: 64 characters Host name: 64 characters Port number: 65535 ODBC driver name: 64 characters
	DBUID	String	1 character	256 characters
	DBPWD	String	1 character	256 characters
	DBTBL	String	1 character	255 characters
	DBATTR	String	1 character	255 characters
	DBEXATTR	String	1 character	4087 characters
	LDAPBIND	Number	0	1
	LDAPPCHG	Number	0	1
	LDAPLANG	Number	0	1
	LDAPSSL	Number	0	1
	LDAPCACERT	String	1 character	255 characters
	LDAPVERIFYS-VRCERT	Number	0	1
	LDAPCIPHERSUITE	String	1 character	255 characters
	LDAPSSLBIND	Number	0	1
	ADPCHG	Number	0	1
	LDAPMULTIVAL	Number	0	1
	LDAPREFERRAL	Number	0	1
	ADDGFWBIND	Number	0	1
	DBCRYPTOATTR	String	1 character	4087 characters
	DBCRYPTOTYPE	Number	0	3
	DBIWCRYPTOSEED	String	1 character	255 characters
Expansion table (ORACLE edition only)	LOGDBTBL	String	1 character	64 characters
	LOGDBATTR	String	1 character	255 characters
	LOGDBSEQNAME	String	1 character	64 characters
Reference table (ORACLE and MySQL editions only)	REFTBL	String	1 character	64 characters
	REFATTR	String	1 character	Number of columns: 1000
				4087 characters
	REFUID	String	1 character	64 characters

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
System tuning configuration	MAXREQTHREAD	Number	1	4096
	REQQUESIZE	Number	1	65535
	MAXDBCONNECT	Number	1	4096
	LOGBUFSIZE	Number	1	65535
	CACHE	Number	1	int maximum value
	RECVWAITTIME	Number	1	60
	THREADSTACKSIZE	Number	HP-UX: 4 / Linux: 16	2048
	ACCTHREAD [10.0]	Number	0	MAXREQTHREAD parameter value: -1
	DBQUESIZE [10.0]	Number	0	CACHE parameter value
	LOGDBQUESIZE [10.0]	Number	0	CACHE parameter value
	DOWNLOADCONF-FLG [10.0]	Number	0	1
	MAXLOGINUSER [10.0]	Number	0	CACHE parameter value
	DBQUERYCNT [10.0]	Number	0	1
Replication	CERT	String	Host name: 1 character Port number: 0	Host name: 64 characters Port number: 65535
	CERTREPTYPE	Number	0	1
	RETRYCNTC	Number	0	256
	RETRYTMC	Number	0	60
	LIVETIMER	Number	1	600
Replication	HEALTHTIMER	Number	1	60
	HEALTHCNT	Number	1	256
	FAILBACK	Number	0	1
	MAXREPTHREAD	Number	1	4096
	REPQUESIZE	Number	1	65535

6.2.2 Group configuration file (cert.grp)

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
	Group definition	String	Group name: 1 character Conditions: 1 character	Group name: 32 characters Conditions: 2048 characters

6.2.3 Access control file (cert.acl)

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
	Access control definition	String	URL: 1 character Conditions: 1 character	URL: 1024 characters Conditions: 2048 characters

6.2.4 Authentication DB column information file (dbattr.conf)

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
Basic user information	UID	String	1 character	64 characters
	PASSWORD	String	1 character	64 characters
	PWDEXPDATE	String	1 character	64 characters
	PWDHISTORY	String	1 character	64 characters
	PCHGOK	String	1 character	64 characters
	PCHGDATE	String	1 character	64 characters
	LLOGINDATE	String	1 character	64 characters
	PLOGINDATE	String	1 character	64 characters
	FLOGINDATE	String	1 character	64 characters
	PWDRETRY	String	1 character	64 characters
	PWDLOCK	String	1 character	64 characters
	LOGINOK	String	1 character	64 characters
	LOCKDATE	String	1 character	64 characters
	LOGINSTAT	String	1 character	64 characters
Client certificate information	RASERIALNO	String	1 character	64 characters
	IWSERIALNO	String	1 character	64 characters
	CERTEXPDATE	String	1 character	64 characters
	GETCERT	String	1 character	64 characters
	ONLINE	String	1 character	64 characters

6.2.5 Log column information file (logdbattr.conf)

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
Basic information	NO	String	1 character	64 characters
	TIME	String	1 character	64 characters
	UID	String	1 character	64 characters
	KIND	String	1 character	64 characters
	RESULT	String	1 character	64 characters
	MSG	String	1 character	64 characters
	CLIP	String	1 character	64 characters
Client certificate information	SERIAL	String	1 character	64 characters

6.2.6 Forbidden password configuration file (pwdforbid.conf)

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
	forbidden_character_string	String	1 character 1 line	128 characters 256 lines

6.2.7 Request control configuration file (request.acl)

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
	TARGET	String	Condition expression: 1 character	Condition expression: 2048 characters
	VERSION	String	Either 1.0 or 2.0	Either 1.0 or 2.0
	REJECT	String	LOGINUID, FLOGINUID, LOGINCERT, FLOGINCERT, ACCESSUID, ACCESSCERT, PWDCHG, LOGOUT, or ALL	LOGINUID, FLOGINUID, LOGINCERT, FLOGINCERT, ACCESSUID, ACCESSCERT, PWDCHG, LOGOUT, ALL
	SEND	String	1 character	4091 characters
	NOTSEND	String	User information name: 1 character	4088 characters
	ACCCTRL	String	uid, cert, or certnouid	uid, cert, certnouid

6.3   Dynamic Menu Portal (dmp)
6.3.1   Servlet configuration file (web.xml)

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
context-param	ContentEncoding	String	1 character	Maximum size of string
	Log4jPropertiesFilePath	String	1 character	Maximum size of string
	ConfigurationFilePath	String	1 character	Maximum size of string
	SystemErrorFilePath	String	1 character	Maximum size of string
	SystemErrorFileEncoding	String	1 character	Maximum size of string
	NoLoginErrorFilePath	String	1 character	Maximum size of string
	NoLoginErrorFileEncoding	String	1 character	Maximum size of string
	RequestACLErrorFile-Path [10.0]	String	1 character	Maximum size of string
	RequestACLErrorFi-leEncoding [10.0]	String	1 character	Maximum size of string
servlet-mapping	DynamicMenuPortal-Servlet [10.0]	String	1 character	Maximum size of string

6.3.2   Log configuration file (log4j.properties)

Not restricted in Dynamic Menu Portal.
See the log4j manual.

6.3.3 Dynamic Menu Portal configuration file (dmp.xml)

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
dmp:CertInformation	dmp:Active	String	Host name: 1 character Port number: 1	Maximum size of string
	dmp:Standby	String	Host name: 1 character Port number: 1	Maximum size of string
	dmp:Master 10.0	String	Host name: 1 character Port number: 1	Maximum size of string
	dmp:Replica 10.0	String	Host name: 1 character Port number: 1	Maximum size of string
	dmp:Timeout	Number	1	600
	dmp:RetryInterval	Number	1	60
	dmp:RetryCount	Number	1	256
	dmp:SessionHeaderName	String	1 character	Maximum size of string
	dmp:TransactionHeaderName 10.0	String	1 character	Maximum size of string
	dmp:ICPVersion 10.0	String	1 character	Maximum size of string
	dmp:ICPAgentStr 10.0	String	1 character	Maximum size of string
	dmp:ICPRemoteAddressHeaderName 10.0	String	1 character	Maximum size of string
	dmp:ICPMethodHeaderName 10.0	String	1 character	Maximum size of string
	dmp:ICPUserAgentHeaderName 10.0	String	1 character	Maximum size of string

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
dmp:CertInforma-tion, dmp:CertLB 10.0	dmp:Active	String	Host name: 1 character Port number: 1	Maximum size of string
	dmp:Standby	String	Host name: 1 character Port number: 1	Maximum size of string
	dmp:Master	String	Host name: 1 character Port number: 1	Maximum size of string
	dmp:Replica	String	Host name: 1 character Port number: 1	Maximum size of string
	dmp:CertUniqueKey	String	1 character	1 character
dmp:Template	dmp:Path	String	1 character	Maximum size of string
	dmp:Encoding	String	1 character	Maximum size of string
dmp:Source (FILE format)	dmp:Alias	String	1 character	Maximum size of string
	dmp:Type	String	Fixed to file	Fixed to file
dmp:Source, dmp:Params	dmp:Path	String	1 character	Maximum size of string
	dmp:Encoding	String	1 character	Maximum size of string
dmp:Source (TEXT format)	dmp:Alias	String	1 character	Maximum size of string
	dmp:Type	String	Fixed to text	Fixed to text
dmp:Source, dmp:Params	dmp:Text	String	1 character	Maximum size of string
dmp:Source (HTTP format)	dmp:Alias	String	1 character	Maximum size of string
	dmp:Type	String	Fixed to http	Fixed to http
dmp:Source, dmp:Params	dmp:URL	String	1 character	Maximum size of string
	dmp:Text	String	1 character	Maximum size of string
	dmp:HeaderName	String	1 character	Maximum size of string
dmp:Condition (Header format)	dmp:Alias	String	1 character	Maximum size of string
	dmp:Type	String	Fixed to header	Fixed to header
dmp:Condition, dmp:Params	dmp:HeaderName	String	1 character	Maximum size of string
	dmp:HeaderValue	String	1 character	Maximum size of string
dmp:Condition (ACL format)	dmp:Alias	String	1 character	Maximum size of string
	dmp:Type	String	Fixed to ACL	Fixed to ACL
dmp:Condition, dmp:Params	dmp:URL	String	1 character	Maximum size of string
dmp:Condition (Time format)	dmp:Alias	String	1 character	Maximum size of string
	dmp:Type	String	Fixed to time	Fixed to time
dmp:Condition, dmp:Params	dmp:Time	String	1 character	Maximum size of string

Parameter category	Parameter name	Configuration attribute type	Minimum value	Maximum value
dmp:Condition (Unconditional format)	dmp:Alias	String	1 character	Maximum size of string
	dmp:Type	String	Fixed to unconditional	Fixed to unconditional
dmp:Replace	dmp:Alias	String	1 character	Maximum size of string
	dmp:SourceAlias	String	1 character	Maximum size of string
	dmp:ConditionAlias	String	1 character	Maximum size of string

7　Log Message List

This chapter provides lists of log messages produced by IceWall SSO.
Refer to this chapter for the logs that you cannot understand the meaning of.

The log messages are listed in the order following order:
First, Level is sorted in the order of FATAL, WARNING, and INFO.
Second, Code IDs are sorted in ascending order within each level.

7.1　Access log message list
7.1.1　Authentication Module access log

Code ID	Level	Message	Description
AC01904-25035	FATAL	Password Expired. UserID=%s	Password has expired. Output value: [UserID=user ID]
AC01905-25001	FATAL	Access Control Request Auth Type Not Match. UserID=%s	The cache authentication method and received authentication method are different. Output value: [UserID=user ID]
AC01906-25005	FATAL	Access Request Auth User Not Match. OldUser=%s, NewUser=%s	The logged in user and user ID requesting access are different. Output value: [OldUser=first logged in user ID] [NewUser=current user ID]
AC01907-25001	FATAL	Access Control Request Auth Type Not Match. UserID=%s	The cache authentication method and received authentication method are different. Output value: [UserID=user ID]
AC01908-25052	FATAL	Request URL Denied. UserID=%s URL=%s	The access permission check did not allow the user with the User ID to access the URL. Output value: [UserID=user ID] [URL=URL]
AC01909-25051	FATAL	Request Group Denied. UserID=%s URL=%s	The group access permission check did not allow the user with the group membership to access the URL. Output value: [UserID=user ID] [URL=URL]
AC01911-25112	FATAL	Deny Request From SOURCE_ADDR=%s Accctrl=%s	URL access privilege verification using user ID was denied. Output value: [SOURCE_ADDR=sender IP address] [Accctrl=UID]

Code ID	Level	Message	Description
AC01912-25112	FATAL	Deny Request From SOURCE_ADDR=%s Accctrl=%s	URL access privilege verification using client certificate was denied. Output value: [SOURCE_ADDR=sender IP address] [Accctrl=CERT]
AC01913-25005	FATAL	Access Request Auth User Not Match. OldUser=%s, NewUser=%s	The logged in user and user ID requesting access are different. Output value: [OldUser=first logged in user ID] [NewUser=current user ID]
AC05901-25016	FATAL	IW Serial Exist. But RA Serial Not Exist. UserID=%s Cert=%d	RA serial does not exist, but IW serial exists. Output value: [UserID=user ID] [Cert=certificate number]
AC05902-25047	FATAL	RA Serial is Not Registered. UserID=%s Cert=%d	Neither RA serial nor IW serial exists. Output value: [UserID=user ID] [Cert=certificate number]
AC06001-25047	FATAL	RA Serial is Not Registered. UserID=%s Cert=%d	RA serial is not registered in Authentication DB. Output value: [UserID=user ID] [Cert=certificate number]
AC06003-25041	FATAL	RA Serial And Receive Serial Not Match. UserID=%s Cert=%d	RA serial and received serial do not match. Output value: [UserID=user ID] [Cert=certificate number]
AC06005-25049	FATAL	Receive Unknown Serial. UserID=%s Cert=%d	Received serial is abnormal. Output value: [UserID=user ID] [Cert=certificate number]
AC10101-25072	FATAL	UserID Not Exist.	User ID does not exist.
AC10104-25058	FATAL	Unknown UserID. UserID=%s	User ID is not registered in the Authentication DB. Output value: [UserID=user ID]
AC10105-25061	FATAL	User Login Error (Database Access). UserID=%s	Could not retrieve user information from the Authentication DB. Output value: [UserID=user ID]
AC10106-25061	FATAL	User Login Error (Database Access). UserID=%s	Could not retrieve user information from the Authentication DB. Output value: [UserID=user ID]
AC10107-25050	FATAL	Reference Unknown UserID. UserID=%s	Cannot retrieve reference database information. Output value: [UserID=user ID]
AC10108-25050	FATAL	Reference Unknown UserID. UserID=%s	Cannot retrieve reference database information. Output value: [UserID=user ID]
AC10109-25017	FATAL	Login Lock. UserID=%s	Login is locked. Output value: [UserID=user ID]
AC10110-25040	FATAL	Password Lock Error. UserID=%s	Password is locked. Output value: [UserID=user ID]
AC10111-25037	FATAL	Password is NULL. UserID=%s	Password is NULL. Output value: [UserID=user ID]

Code ID	Level	Message	Description
AC10112-25038	FATAL	Password Lock. UserID=%s	Password is locked. Output value: [UserID=user ID]
AC10113-25079	FATAL	Login Password Hash Error. UserID=%s	Password hash error occurred. Output value: [UserID=user ID]
AC10115-25034	FATAL	Password Error. UserID=%s	Password error occurred. Output value: [UserID=user ID]
AC10116-25038	FATAL	Password Lock. UserID=%s	Password is locked. Output value: [UserID=user ID]
AC10117-25007	FATAL	Can Not Access For Uid/Password. UserID=%s	Cannot log in with Uid/Password. Output value: [UserID=user ID]
AC10118-25008	FATAL	Client Certificate Error. UserID=%s	Failed to check the Client Certificate used for certificate login. Output value: [UserID=user ID]
AC10123-25023	FATAL	Max User Login. Login Failed. UserID=%s	Could not log in because the number of user logins reached the maximum count. Output value: [UserID=user ID]
AC10127-25061	FATAL	User Login Error (Database Access). UserID=%s	Cannot retrieve SAML user information. Output value: [UserID=user ID]
AC10903-25066	FATAL	User Logout Error. UserID=%s	Could not delete the user information from the user cache. Output value: [UserID=user ID]
AC11404-25077	FATAL	Password Change Database Error. UserID=%s	Could not retrieve the password information from the cache or authentication database column. Output value: [UserID=user ID]
AC11407-25080	FATAL	New Password Hash Error. UserID=%s	Failed to hash new password. Output value: [UserID=user ID]
AC11413-25077	FATAL	Password Change Database Error. UserID=%s	Failed to change authentication database password data. Output value: [UserID=user ID]
AC11415-25027	FATAL	Password Change Error. UserID=%s	Failed to change password. Output value: [UserID=user ID]
AC11417-25027	FATAL	Password Change Error. UserID=%s	Failed to change password. Output value: [UserID=user ID]
AC17802-25088	FATAL	Reference User Login Status Request. UserID=%s	Login status request occurred. Output value: [UserID=user ID]

Code ID	Level	Message	Description
AC17804-25089	FATAL	Reference Forced to Logout Request. UserID=%s	Forced logout request occurred. Output value: [UserID=<u>user ID</u>]
AC17805-25090	FATAL	Reference Forced to Logout Request. UserID(First)=%s	Forced logout request occurred. Output value: [UserID=<u>user ID</u>]
AC17806-25091	FATAL	Reference Forced to Logout Request. UserID(ALL)=%s	Forced logout request occurred. Output value: [UserID=<u>user ID</u>]
AC17807-25091	FATAL	Reference Forced to Logout Request. UserID(ALL)=%s	Forced logout request occurred. Output value: [UserID=<u>user ID</u>]
AC18001-25092	FATAL	Reference Unknown UserID Status Error. UserID=%s	Target user ID of login status request does not exist. Output value: [UserID=<u>user ID</u>]
AC18002-25097	FATAL	Reference Unknown UserID Logout Error. UserID=%s.	Cannot log out because target user ID does not exist. Output value: [UserID=<u>user ID</u>]
AC18003-25098	FATAL	Reference Format Error. Req-ID=%c.	Status request format error occurred. Output value: [Req-ID=<u>request ID</u>]
AC18004-25098	FATAL	Reference Format Error. Req-ID=%c.	Status request format error occurred. Output value: [Req-ID=<u>request ID</u>]
AC18005-25094	FATAL	Reference Forced to Logout Success. UserID=%s.	Forced logout succeeded. Output value: [UserID=<u>user ID</u>]
AC18006-25095	FATAL	Reference Forced to Logout Success. UserID(First)=%s.	Forced logout succeeded. Output value: [UserID=<u>user ID</u>]
AC18007-25096	FATAL	Reference Forced to Logout Success. UserID(ALL)=%s.	Forced logout succeeded. Output value: [UserID=<u>user ID</u>]
AC18008-25096	FATAL	Reference Forced to Logout Success. UserID(ALL)=%s.	Forced logout succeeded. Output value: [UserID=<u>user ID</u>]
AC18101-25093	FATAL	Reference User Login. UserID=%s. Count=%d.	Login request occurred. Output value: [UserID=<u>user ID</u>] [Count=<u>number of users</u>]
AC18201-25093	FATAL	Reference User Login. UserID=%s. Count=%d.	Login request occurred. Output value: [UserID=<u>user ID</u>] [Count=<u>number of users</u>]
AC18202-25092	FATAL	Reference Unknown UserID Status Error. UserID=%s	Target user ID of login status request does not exist. Output value: [UserID=<u>user ID</u>]
AC18401-25097	FATAL	Reference Unknown UserID Logout Error. UserID=%s.	Cannot log out because target user ID does not exist. Output value: [UserID=<u>user ID</u>]

Code ID	Level	Message	Description
AC18503-25100	FATAL	Reference User Logout Error. UserID=%s	Failed to log out. Output value: [UserID=user ID]
AC31004-25111	FATAL	Ununique Cookie. UserID=%s %s	Existing session ID was generated. Output value: [UserID=user ID] [session ID]
AC70286-25061	FATAL	User Login Error (Database Access). UserID=%s	Could not decrypt user information when retrieving from the authenticatin DB. Output value: [UserID=user ID]
AC70369-25017	FATAL	Login Lock. UserID=%s	Login is locked. Output value: [UserID=user ID]
AC70379-25007	FATAL	Can Not Access For Uid/Password. UserID=%s	Cannot log in with Uid/Password. Output value: [UserID=user ID]
AC70382-25008	FATAL	Client Certificate Error. UserID=%s	Failed to check the Client Certificate used for certificate login. Output value: [UserID=user ID]
AC70515-25100	FATAL	Reference User Logout Error. UserID=%s	Failed to log out. Output value: [UserID=user ID]
AC71120-25016	FATAL	IW Serial Exist. But RA Serial Not Exist. UserID=%s Cert=%d	RA serial does not exist, but IW serial exists. Output value: [UserID=user ID] [Cert=certificate number]
AC71122-25047	FATAL	RA Serial is Not Registered. UserID=%s Cert=%d	RA serial is not registered in Authentication DB. Output value: [UserID=user ID] [Cert=certificate number]
AC71124-25041	FATAL	RA Serial And Receive Serial Not Match. UserID=%s Cert=%d	RA serial and received serial do not match. Output value: [UserID=user ID] [Cert=certificate number]
AC71126-25049	FATAL	Receive Unknown Serial. UserID=%s Cert=%d	Received serial is abnormal. Output value: [UserID=user ID] [Cert=certificate number]
AC71136-25072	FATAL	UserID Not Exist.	User ID does not exist.
AC71137-25058	FATAL	Unknown UserID. UserID=%s	User ID is not registered in the Authentication DB. Output value: [UserID=user ID]
AC71138-25017	FATAL	Login Lock. UserID=%s	Login is locked. Output value: [UserID=user ID]
AC71139-25037	FATAL	Password is NULL. UserID=%s	Password is NULL. Output value: [UserID=user ID]
AC71140-25038	FATAL	Password Lock. UserID=%s	Login is locked. Output value: [UserID=user ID]

Code ID	Level	Message	Description
AC71141-25034	FATAL	Password Error. UserID=%s	Password error occurred. Output value: [UserID=user ID]
AC71142-25038	FATAL	Password Lock. UserID=%s	Login is locked. Output value: [UserID=user ID]
AC71143-25007	FATAL	Can Not Access For Uid/Password. UserID=%s	Cannot log in with Uid/Password. Output value: [UserID=user ID]
AC71144-25008	FATAL	Client Certificate Error. UserID=%s	Failed to check the Client Certificate used for certificate login. Output value: [UserID=user ID]
AC71147-25023	FATAL	Max User Login. Login Failed. UserID=%s	Could not log in because the number of user logins reached the maximum count. Output value: [UserID=user ID]
AC71150-25066	FATAL	User Logout Error. UserID=%s	Could not delete the user information from the user cache. Output value: [UserID=user ID]
AC01901-25053	WARNING	Unknown Cookie. Cookie=%s	Not logged in. Output value: [Cookie=session ID]
AC01910-25006	WARNING	Access. UserID=%s, URL=%s	Finished access privilege verification. Output value: [UserID=user ID] [URL=URL]
AC07102-25053	WARNING	Unknown Cookie. Cookie=%s	Not logged in. Output value: [Cookie=session ID]
AC10102-25063	WARNING	User Login Request. UserID=%s IPaddress=%s	User authentication using user ID. Output value: [UserID=user ID] [IPaddress=IP address]
AC10103-25064	WARNING	User Login Request. UserID=%s SerialNo=%s Expire=%s IPaddress=%s	User authentication using client certificate. Output value: [UserID=user ID] [Serial No.=certificate serial] [Expire=certificate expiration date] [IPaddress=IP address]
AC10119-25026	WARNING	No Group User. UserID=%s	There is no group assigned. Output value: [UserID=user ID]
AC10121-25013	WARNING	Forced to Logout. UserID=%s %s	Forced logout occurred. Output value: [UserID=user ID] [logged in period]
AC10124-25065	WARNING	User Login. UserID=%s	User logged in. Output value: [UserID=user ID]
AC10125-25108	WARNING	SAML User Login Request. UserID=%s IPaddress=%s	SAML user ID authentication started (forced authentication). Output value: [UserID=user ID] [IPaddress=IP address]

Code ID	Level	Message	Description
AC10126-25109	WARNING	Federation User Login Request. UserID=%s IPaddress=%s	Federation user ID authentication started (forced authentication). Output value: [UserID=user ID] [IPaddress=IP address]
AC10901-25053	WARNING	Unknown Cookie. Cookie=%s	Not logged in. Output value: [Cookie=session ID]
AC10904-25068	WARNING	User Logout. UserID=%s %s	Logged out. Output value: [UserID=user ID] [logged in period]
AC11304-25020	WARNING	Login Timeout. UserID=%s %s	User logged out due to a timeout. Output value: [UserID=user ID] [logged in period]
AC11402-25053	WARNING	Unknown Cookie. Cookie=%s	Not logged in. Output value: [Cookie=session ID]
AC11405-25031	WARNING	Password Change Permission Error. UserID=%s	No password change privileges. Output value: [UserID=user ID]
AC11409-25028	WARNING	Password Change History Error. UserID=%s	Current password matches new password, or current password is NULL. Output value: [UserID=user ID]
AC11410-25028	WARNING	Password Change History Error. UserID=%s	New password matches one in password history. Output value: [UserID=user ID]
AC11411-25030	WARNING	Password Change Pattern Error. UserID=%s	New password matches forbidden character string. Output value: [UserID=user ID]
AC11412-25027	WARNING	Password Change Error. UserID=%s	Failed to change password. Output value: [UserID=user ID]
AC11416-25033	WARNING	Password Changed. UserID=%s	Password change succeeded. Output value: [UserID=user ID]
AC11418-25113	WARNING	Password Change Invalid Character Error. UserID=%s	New password contains invalid characters. Output value: [UserID=user ID]
AC13002-25014	WARNING	Forced to Logout. (Replication) UserID=%s	Duplicate logins are not permitted, so the previously logged in user was forced to logout. Output value: [UserID=user ID]
AC16003-25053	WARNING	Unknown Cookie. Cookie=%s	Not logged in. Output value: [Cookie=session ID]
AC17808-25107	WARNING	Deny Request From SOURCE_ADDR=%s Request=%s	Forced logout request was denied. Output value: [SOURCE_ADDR=sender IP address] [Request=FORCELOGOUT]

Code ID	Level	Message	Description
AC18501-25053	WARNING	Unknown Cookie. Cookie=%s	Not logged in. Output value: [Cookie=session ID]
AC18504-25101	WARNING	Reference User Logout. UserID=%s %s	Logged out. Output value: [UserID=user ID] [logged in period]
AC22101-25107	WARNING	Deny Request From SOURCE_ADDR=%s Request=%s	No request execution permission. Output value: [SOURCE_ADDR=sender IP address] [Request=authentication method(LOGINSAML)]
AC22102-25107	WARNING	Deny Request From SOURCE_ADDR=%s Request=%s	No request execution permission. Output value: [SOURCE_ADDR=sender IP address] [Request=authentication method(FLOGINSAML)]

7.2.3 Authentication Module error log (for ORACLE edition only)

Code ID	Level	Message	Description
EO00902-50013	FATAL	No Database Host.	Authentication database host name is not set.
EO00903-50011	FATAL	No Database Attach UserID.	User ID for connecting to authentication database is not set.
EO00905-50010	FATAL	No Database Attach Password.	Password for connecting to authentication database is not set.
EO00907-50016	FATAL	No Database Table Name.	Table name for connecting to authentication database is not set.
EO00908-50017	FATAL	No Database UserID Column.	User ID column name for connecting to authentication database is not set.
EO00909-50014	FATAL	No Database Password Column.	Password column name for connecting to authentication database is not set.
EO00910-50038	FATAL	No Reference UserID Column.	User ID column name for connecting to authentication database is not set.
EO00911-50037	FATAL	No Reference Attribute.	Attribute name for connecting to authentication database is not set.
EO01101-50015	FATAL	No Database Sequence Name .	Sequential object is not set.
EO01403-00026	FATAL	malloc() Error. Errno=%d	Failed to allocate area for storing SQL descriptor. Output value: [Errno=error number output from OS]
EO01404-00026	FATAL	malloc() Error. Errno=%d	Failed to allocate area for storing SQL descriptor. Output value: [Errno=error number output from OS]
EO01405-00026	FATAL	malloc() Error. Errno=%d	Failed to allocate memory area required when initializing SQLDA structure. Output value: [Errno=error number output from OS]
EO01406-00026	FATAL	malloc() Error. Errno=%d	Failed to allocate memory area required when initializing SQLDA structure. Output value: [Errno=error number output from OS]

Code ID	Level	Message	Description
EO01407-00026	FATAL	malloc() Error. Errno=%d	Failed to allocate memory area required when initializing SQLDA structure. Output value: [Errno=error number output from OS]
EO01408-00026	FATAL	malloc() Error. Errno=%d	Failed to allocate memory area required when initializing SQLDA structure. Output value: [Errno=error number output from OS]
EO01409-50039	FATAL	Out of Buffer. [SQL > %d]	SQL statement is too long. Output value: [16576]
EO01411-50045	FATAL	SQL CONTEXT USE Error.	Failed to select context.
EO01412-50052	FATAL	SQL PREPARE Error.	Failed to analyze SQL statement.
EO01413-50046	FATAL	SQL DECLARE Error.	Failed to declare cursor.
EO01414-50047	FATAL	SQL DESCRIBE BIND VARIABLES Error.	Failed to initialize bind descriptor.
EO01415-50050	FATAL	SQL Item Overflow.	Number of bind descriptor variables is invalid.
EO01416-00026	FATAL	malloc() Error. Errno=%d	Failed to allocate VALUE area. Output value: [Errno=error number output from OS]
EO01417-50051	FATAL	SQL OPEN CURSOR Error.	Failed in OPEN cursor.
EO01418-50048	FATAL	SQL DESCRIBE SELECT LIST Error.	Failed in DESCRIBE for selection list.
EO01419-50054	FATAL	SQL Select List Overflow.	Too many parameters are selected.
EO01420-00026	FATAL	malloc() Error. Errno=%d	Failed to allocate memory area required to verify retrieved VALUE. Output value: [Errno=error number output from OS]
EO01422-00026	FATAL	malloc() Error. Errno=%d	Failed to allocate memory area required to verify retrieved VALUE type. Output value: [Errno=error number output from OS]
EO01423-00026	FATAL	malloc() Error. Errno=%d	Failed to allocate memory area required to verify retrieved VALUE type. Output value: [Errno=error number output from OS]
EO01424-00018	FATAL	IW_ModifyConfigValue() Error.	Failed to set retrieved VALUE to IW_CONF structure. Output value: [Errno=error number output from OS]
EO01425-50043	FATAL	SQL CLOSE Error.	Failed in CLOSE of SQL cursor.
EO01427-00026	FATAL	malloc() Error. Errno=%d	Failed to allocate an area to store the FETCH results. Output value: [Errno=error number output from OS]

Code ID	Level	Message	Description

7.3   Audit log message list

History type	Operation result	IP address	Message	Status
1	1	○	Can Not Access For Uid/Password. UserID=%s	Cannot log in with Uid/Password. Output value: [UserID=user ID]
1	1	○	Client Certificate Error. UserID=%s	Failed to check the Client Certificate used for certificate login. Output value: [UserID=user ID]
1	0	○	Duplicate Login. UserID=%s	Duplicate login. Output value: [UserID=user ID]
1	1	○	IW Serial Exist. But RA Serial Not Exist. UserID=%s Cert=%d	RA serial does not exist, but IW serial exists. Output value: [UserID=user ID] [Cert=certificate number]
1	1	○	Login Lock. UserID=%s	Login is locked. Output value: [UserID=user ID]

History type	Operation result	IP address	Message	Status
1	1	○	Max User Login. Login Failed. UserID=%s	Could not log in because the number of user logins reached the maximum count. Output value: [UserID=<u>user ID</u>]
1	1	○	Password Error. UserID=%s	Password error occurred. Output value: [UserID=<u>user ID</u>]
1	1	○	Password is NULL. UserID=%s	Password is NULL. Output value: [UserID=<u>user ID</u>]
1	1	○	Password Lock. UserID=%s	Password is locked. Output value: [UserID=<u>user ID</u>]
1	1	○	RA Serial And Receive Serial Not Match. UserID=%s Cert=%d	RA serial and received serial do not match. Output value: [UserID=<u>user ID</u>] [Cert=<u>certificate number</u>]
1	0	○	RA Serial Exist & IW Serial Exist. UserID=%s Cert=%d	RA serial, IW serial, and received serial matched. Output value: [UserID=<u>user ID</u>] [Cert=<u>certificate number</u>]
1	0	○	RA Serial Exist. IW Serial Not Exist. UserID=%s Cert=%d	RA serial exists, but IW serial does not exist. Output value: [UserID=<u>user ID</u>] [Cert=<u>certificate number</u>]
1	1	○	RA Serial is Not Registered. UserID=%s Cert=%d	RA serial is not registered in authentication database. Output value: [UserID=<u>user ID</u>] [Cert=<u>certificate number</u>]
1	1	○	Receive Unknown Serial. UserID=%s Cert=%d	Received serial is abnormal. Output value: [UserID=<u>user ID</u>] [Cert=<u>certificate number</u>]
1	1	×	Unknown Cookie. Cookie=%s	Not logged in. Output value: [Cookie=<u>session ID</u>]
1	1	○	Unknown UserID. UserID=%s	User ID is not registered in the authentication database. Output value: [UserID=<u>user ID</u>]
1	0	○	User Login. UserID=%s	User logged in. Output value: [UserID=<u>user ID</u>]
1	1	○	UserID Not Exist.	User ID does not exist.
2	1	○	User Logout Error. UserID=%s	Could not delete the user information from the user cache. Output value: [UserID=<u>user ID</u>]
2	0	○	User Logout. UserID=%s %s	User logged out. Output value: [UserID=<u>user ID</u>] [<u>logged in period</u>]

History type	Operation result	IP address	Message	Status
2	0	○	User Logout. (All User Logout) UserID=%s %s	User logged out. Output value: [UserID=user ID] [logged in period]
3	0	○	Login Timeout. UserID=%s %s	User logged out due to a timeout. Output value: [UserID=user ID] [logged in period]
4	0	○	Forced to Logout. UserID=%s %s	Forced logout occurred. Output value: [UserID=user ID] [logged in period]
4	0	○	Reference User Logout. UserID=%s %s	User logged out. Output value: [UserID=user ID] [logged in period]

7.4 Security log message list

SECINFO	User ID	IP address	AGENT_KEY	Message	Description
LOGIN	○	○	×	Userid login.	Login by user ID authentication was successful.
	○	○	○	ClientCert login.	Login by client certificate authentication was successful.
LOGOUT	× *1	○	×	Logout.	Logout was successful.
PWDCHG	○	○	×	PasswordChange.	Password change was successful.
AGENT	○	○	○	Agent userid login. agent=xxxx	Agent login link operation by user ID authentication was successful. Output value: [agent=agent server host name]
	○	○	○	Agent ClientCert login. agent=xxxx	Agent login link operation by client certificate authentication was successful. Output value: [agent=agent server host name]
	○	○	○	Agent sid reissue. agent=xxxx	Agent session ID reissuing link operation was successful. Output value: [agent=agent server host name]
	○	○	○	Agent userid re-login. agent=xxxx	Agent relogin link operation by user ID authentication was successful. Output value: [agent=agent server host name]
	○	○	○	Agent ClientCert re-login. agent=xxxx	Agent relogin link operation by client certificate authentication was successful. Output value: [agent=agent server host name]
PAGE	○ *2	○	○ *2	Output page.[xxxx] path=xxxx	Template HTML for request from client displayed. Output value: [template HTML name] [path=requested URL]

The output message is for SECLEVEL=0. Information like "uid=xxx" for SECLEVEL 1, and "key=xxx uid=xxx ip=xxx.xxx.xxx.xxx" for SECLEVEL 2 is added.

*1 The user ID is not output, but "uid=" is output in the message.
*2 There may be no output for certain operations.

Each parameter name in the HTML configuration file (html.conf) is output as the HTML template name when PAGE is set as the SECINFO parameter. However, if a preset page is displayed when the system error page cannot be displayed, "DFWERROR" is output.
